

Sean Huang

647-631-0882 | sean.huang16@hotmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

TECHNICAL SKILLS

Programming Languages: C, CSS, HTML, JavaScript, Java, Python, SQL, TypeScript

Cloud & AI: Microsoft Azure, Azure AI Foundry, Azure OpenAI, Microsoft Copilot Studio, Microsoft Power Automate, Microsoft Power Apps, Microsoft 365 Copilot, GitHub Copilot, Agentic AI

Developer Tools: Atlassian, Bash, Bitbucket, Figma, Git, Jenkins, Jira, Postman, Sanity Studio, Visual Studio Code

Skills: Agile Development, Algorithms, Cross-functional Collaboration, Frontend Development, Operating Systems, RESTful APIs, Software Development Life Cycle, Troubleshooting, Unit Testing, Web Development

Work Experience

AI Software Developer Intern

May 2026 – Present

EQ Bank

Toronto, ON

- Automated internal business processes using **Microsoft Power Automate**, reducing manual effort by **30%**.
- Designed and deployed internal AI agents with **Microsoft Copilot Studio** to automate repetitive workflows, retrieve information, and assist employees with day-to-day business tasks.
- Developed end-to-end AI and automation solutions incorporating **Role-based Access**, **Microsoft Azure Blob Storage**, and backend services, to support authentication, system integrations, and application workflows.
- Collaborated with cross-functional stakeholders to identify automation opportunities and translate business requirements into scalable AI solutions using **Microsoft Azure**, **Power Automate**, and **Copilot Studio**.
- Implemented automated AI evaluation frameworks using **Microsoft Foundry**, deploying agents in a **worker/judge** workflow with **LLM-as-a-Judge** to generate and execute test cases for accuracy and reliability.

Software Developer Intern

May 2025 – August 2025

OTT Financial Group

Toronto, ON

- Developed seamless front-end features using **Angular** to support fintech operations and merchant management.
- Collaborated effectively with cross-functional teams to perform **system requirements analysis** and translated them into functional UI implementations using modern **Angular** practices and **responsive design principles**.
- Assisted in writing **automated software testing** to ensure reliability and security of internal applications.
- Integrated **RESTful backend APIs** into Angular components to fetch and display real-time data, streamlining merchant operations and enhancing user experience across multiple platforms.

Web Developer

June 2025 – Present

01 Quantum Inc

Toronto, ON (Remote)

- Developed seamless front-end web features using **Next.js**, streamlining user experiences across various displays.
- Partnered with designers to accurately translate **Figma** mockups into reusable and type-safe web components.
- Assisted in **deploying and testing** software updates to ensure reliability and security of internal applications.
- Integrated **Sanity Studio** as a **headless CMS**, enabling teams to incorporate seamless content publishing.
- Replaced a manual CMS publishing process with an automated **Sanity webhook-driven** build pipeline, empowering writers to publish independently while ensuring secure, reliable static site deployments.

Projects

Futguesser | Pandas, NumPy, PyArrow, Scikit-learn

April 2026

- Built a soccer prediction pipeline in **Python** using **Pandas**, **NumPy**, **PyArrow**, and **scikit-learn**, ingesting and normalizing **13,000+** matches across 5 major leagues and 8 seasons from heterogeneous CSV sources.
- Engineered **leakage-resistant ML features** using shifted 5- and 15-match rolling windows for points, goals, goal differential, shots, shots-on-target, attack ratios, and team-vs-team differentials.
- Developed probabilistic prediction models combining regularized Poisson regression for goal rates with multinomial logistic calibration, achieving **53.2%** accuracy and **0.981 log loss** on a chronological **20%** holdout set.
- Built an inference and decision-support workflow that serializes models with **Joblib**, processes upcoming fixtures, converts goal distributions into win/draw/loss probabilities, and runs **10,000 seeded Monte Carlo simulations** to estimate league title probabilities.

Education

Toronto Metropolitan University (*Formerly Ryerson University*)

Graduation Date: Apr. 2027

B.Sc in Computer Science

Toronto, ON

- Relevant Courses: Introduction to Software Engineering, Data Structures, Computer Architecture.
